

## LET'S LAUNCH A ROCKET TO THE MOON, CARRYING BITCOIN PRIVATE KEYS.

That's the point of bitcoin, right? We can do whatever we want.  
So why are we waiting to go to the moon?

Let's just do it.

This would by far be bitcoin's largest PR stunt, in history. Pulling off something so magnificent, hilarious, and epic would garner world-wide attention of a digital meme being brought into life. An idea that manifests out of the will of many, enabled by a technology that empowers global collaboration.

This would by far be bitcoin's largest PR stunt, in history. Pulling off something so magnificent, hilarious, and epic would garner world-wide attention of a digital meme being brought into life. An idea that manifests out of the will of many, enabled by a technology that empowers global collaboration.

This isn't even that far-fetched. [Google is already throwing money towards moon landings](#). Are you saying that Google is the only entity capable of moon feats?

## LET'S DO IT BETTER.

Through the collective effort of many enthusiasts, we'll put a bitcoin wallet on the moon. Over time, it would become a popular burn address that anyone can contribute towards and increase the bounty. As funds trickle into the wallet, as the price of bitcoin increases and as the cost of space travel decreases...

**WE'LL DECENTRALIZE THE BOUNTY  
FOR A GLOBAL RACE TO THE MOON.**

**MADE POSSIBLE BY BITCOIN.  
(THANKS SATOSHI)**
